0.8 GPF Ultra High Efficiency Toilet

what is Stealth™?

Innovative and stylish, Niagara's 0.8 GPF Stealth™ UHET – ultra high-efficiency toilet – goes a step beyond the standard water-saving toilets available on the market. With its low-profile body, breakthrough patented hydraulic technology, and the quietest flush on the planet, Stealth's unique design has revolutionized the toilet market. As water fills the tank, energy is harnessed and a patented air transfer system exerts pressure in the bowl's trapway. Activated by simply pressing the flush button, all the waste in the bowl is cleared with a one-time, powerful, quiet flush. Offered in both round and elongated models and adaptable to fit a standard 12" roughing installation, the Stealth easily replaces your existing toilet, lowering water usage and utility bills like no toilet ever has.

key features:

Ultra High Efficiency Flush

- Powerful flush delivered with a patented Stealth™ flush chamber and air transfer system
- Uses just 0.8 gallons per flush (0.8 GPF)
- One flush thoroughly evacuates the bowl every time – no need for double flushing or dual-flush systems

Large Water Surface

- As the tank fills, air is transferred to the trapway
- A large water surface is created as this air pressure causes the water to fill at a higher level
- Stealth™ delivers a cleaner and more reliable flush with more water in the bowl

Superior Engineered Ceramics

- Fully glazed trapway
- Bowl cleared every time due to smooth, low-friction ceramic surface

what it saves

The Stealth™ toilet's water and utility bill savings translate to impressive, real numbers. At a flush rate that saves **37%** more water than a standard HET, this WaterSense®-certified toilet saves up to **20,000** gallons and **\$101** per year* with regular use and up to **200,000** gallons and **\$1,013** in its lifetime*!

37%
less water
than
standard
HET

*Annual water savings based on 3.5 GPF Toilet with 4 people/5 flushes per day.

how it works

With its groundbreaking technology, the Stealth™ toilet delivers a powerful, effective, one-time flush. With a combination of air and water working in unison for an ideal filling and flushing system, this toilet provides a larger water spot to better clear waste with minimal water use. The system is not only capable of functioning efficiently at varying water pressure levels, but it has no expensive parts to replace, further saving the customer money and reducing materials use. Completing its superior engineering, the modern, compact design makes it ideal for both new construction and retrofitting projects.
